14、定义域分别是 D_f 、 D_g 的函数y = f(x)与y = g(x),规定:

$$h(x) = \begin{cases} f(x) \cdot g(x) & \exists x \in D_f, \exists x \in D_g \\ f(x) & \exists x \in D_f, \exists x \notin D_g \\ g(x) & \exists x \in D_g, \exists x \notin D_f \end{cases}$$

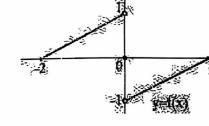

①若函数 $f(x) = \frac{1}{x-1}$, $g(x) = x^2$, 求函数 h(x) 的解析式; ②求①中函数 h(x) 的

①求函数y = f[g(x)]的解析式; ②求函数y = g[f(x)]的解析式.

$$f: R \rightarrow [0,1]$$

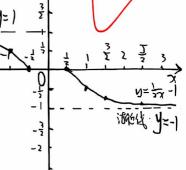

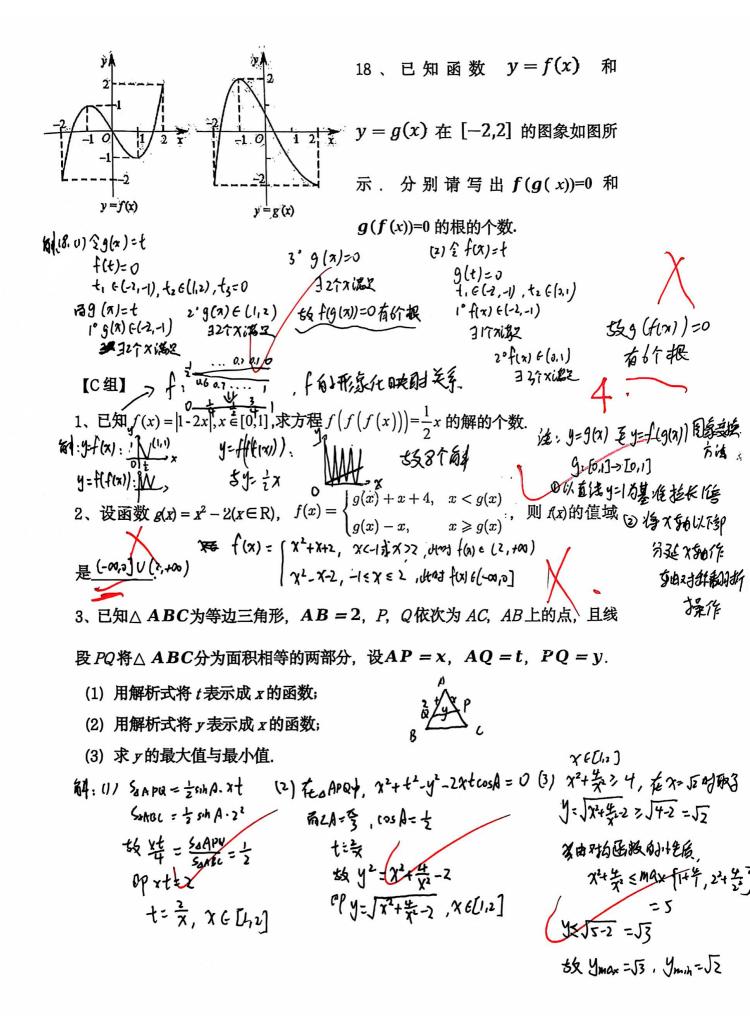

(2) 若 $g(x) = f(\frac{1}{x})$, 求 g(x) 的解析式, 并作

出
$$g(x)$$
 的图象
$$(2) g(x) = f(x) = \begin{cases} \frac{1}{2x} + 1 & \chi \in (-\infty, -\frac{1}{2}] \\ 0 & \chi = 0 \\ \frac{1}{2x} - 1 & \chi \in (0, 2) \end{cases}$$

(3) 已知 f(x) 满足 $2f(x) + f(\frac{1}{x}) = 3x$,求 f(x).

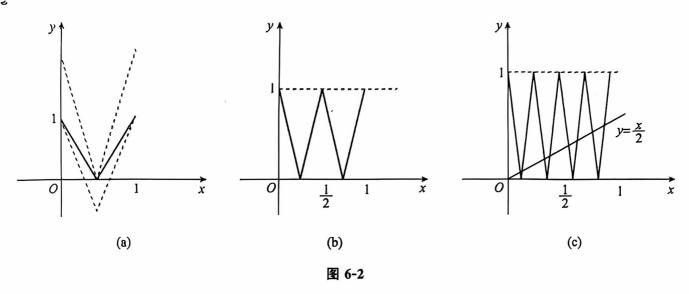

及由于 $1329 < \sqrt{1006 × 2011} < 1423;$ 所以 f(x) 的 庭小值一定在 $f(\frac{1}{1422})$ 与 $f(\frac{1}{1422})$ 的 商业组一定在 $f(\frac{1}{1422}) = \frac{502043}{711} < f(\frac{1}{1423}) = \frac{1012399}{1423}$, 野以、当 $x = -\frac{1}{1429}$ 时, $f(x)_{\min} = f(\frac{1}{1422}) = \frac{502043}{711}$,

【例 6-4】 已知 $f(x) = |1 - 2x|, x \in [0.1]$, 试问, 方程 $f(f(f(x))) - \frac{1}{2}x$ 有多少个实根?

同料的方法可作函数 f(f(f(x))) = |2f(f(x)) - 1| 的图像,如图 6-2(c),它与直线 $y = \frac{\varepsilon}{o}$ 在[0,1] 上有 8 个交点,因此,原方程有 8 个实数解.

评注 例 6-4 涉及到含绝对值符号的一次函数,根据题设,有
